

BiteBlock

Our top-rated mouth protection solution that safeguards your patients and endoscopy equipment.

Why choose BiteBlocks?

Seamless Form and Function

Our Bite Blocks reduce endoscope friction, provide convenient access for suctioning, and allow easy adjustments throughout procedures.

Shaped for Comfort

Our Bite Blocks are flexible and adaptable. They conform to the sides of the mouth and face, allowing them to maintain a proper position during endoscopy procedures.

Designed for Safety

Our Bite Blocks and adjustable straps are latex free. The dental retention rim reduces the risk of gum damage and prevents patients from biting down on the endoscope insertion tube.

The Clinical Choice Advantage

Our OEM-equivalent solutions effectively harmonize resources, requirements, and our dedicated aftersales care. For over 15 years, we've been able to offer significant savings, deliver high-quality products, and excellent customer support. We currently serve over 1,200 hospitals and ambulatory centers from our HQ in Greensboro, NC—we are truly proud to say that our products are being used by thousands of professionals daily.
